General

'Tanya Rendall' is a hybrid geranium that was bred in the Orkney Islands by Richard Rendall who named the plant after his daughter. This is a low-growing geranium that rises to only 6-8" tall and spreads to 12" wide. Foliage emerges bronze-red in spring, maturing to dark green by summer. Magenta flowers with a white eye cover the plant with bloom in May. In cool summer climates, flowering will usually continue throughout summer. In hot summer climates, foliage will decline and flowering will usually stop in mid-summer.
